About this manual

This manual contains service and reference information for ThinkPad® Reserve Edition (MT 8748) products. Use this manual along with the advanced diagnostic tests to troubleshoot problems.

The manual is divided into sections as follows:
- The common sections provide general information, guidelines, and safety information required in servicing computers.
- The product-specific section includes service, reference, and product-specific parts information.

**Important**
This manual is intended for trained service personnel who are familiar with ThinkPad products. Use this manual along with the advanced diagnostic tests to troubleshoot problems effectively.

Before servicing a ThinkPad product, be sure to review the safety information under “Safety notices: multilingual translations” on page 7, “Safety information” on page 13 and “Laser compliance statement” on page 17.
Introduction

Important service information

**Important**

BIOS and device driver fixes are customer-installable. The BIOS and device drivers are posted on the customer support site [http://www.lenovo.com/support](http://www.lenovo.com/support).

Advise customers to contact the Customer Support Center at 800-426-7378 if they need assistance in obtaining or installing any software fixes, drivers, and BIOS downloads.

Customers in Canada should call the Customer Support Center at 800-565-3344 for assistance or download information.

Strategy for replacing FRUs

**Before replacing parts**

Make sure that all software fixes, drivers, and BIOS downloads are installed before replacing any FRUs listed in this manual.

After a system board is replaced, ensure that the latest BIOS is loaded to the system board before completing the service action.

To download software fixes, drivers, and BIOS, do as follows:

1. Go to [http://www.lenovo.com/support](http://www.lenovo.com/support)
2. Enter the product number of the computer or press Auto-detect button on the screen.
3. Select Downloads and drivers.
4. Follow the directions on the screen and install the necessary software.

Use the following strategy to prevent unnecessary expense for replacing and servicing FRUs:

- **If you are instructed to replace a FRU but the replacement does not correct the problem, reinstall the original FRU before you continue.**
- Some computers have both a processor board and a system board. If you are instructed to replace either the processor board or the system board, and replacing one of them does not correct the problem, reinstall that board, and then replace the other one.
- **If an adapter or a device consists of more than one FRU, any of the FRUs may be the cause of the error. Before replacing the adapter or device, remove the FRUs, one by one, to see if the symptoms change. Replace only the FRU that changed the symptoms.**
Important service information

Attention: The setup configuration on the computer you are servicing may have been customized. Running Automatic Configuration may alter the settings. Note the current configuration settings (using the View Configuration option); then, when service has been completed, verify that those settings remain in effect.

Strategy for replacing a hard disk drive
Always try to run a low-level format before replacing a hard disk drive. This will cause all customer data on the hard disk to be lost. Be sure that the customer has a current backup of the data before doing this task.

Attention: The drive startup sequence in the computer you are servicing may have been changed. Be extremely careful during write operations such as copying, saving, or formatting. If you select an incorrect drive, data or programs can be overwritten.

Important notice for replacing a system board
Some components mounted on a system board are very sensitive. Improper handling of a system board can cause damage to those components, and may cause a system malfunction.

Attention: When handling a system board:
• Do not drop a system board or apply any excessive force to it.
• Avoid rough handling of any kind.
• Avoid bending a system board and hard pushing to prevent cracking at each BGA (Ball Grid Array) chipset.

How to use error messages
Use the error codes displayed on the screen to diagnose failures. If more than one error code is displayed, begin the diagnosis with the first error code. Whatever causes the first error code may also cause false error codes. If no error code is displayed, see whether the error symptom is listed in the Symptom-to-FRU Index for the computer you are servicing.

Strategy for replacing FRUs for CTO, CMV, and GAV

Product definition

Dynamic Configure To Order (CTO)
This provides the ability for a customer to configure an IBM® or a Lenovo™ solution from an eSite, and have this configuration sent to fulfillment, where it is built and shipped directly to the customer. The machine label, Product Entitlement Warehouse (PEW), eSupport, and the HMM will load these products as the 4-digit MT and 3-digit model, where model = “CTO” (Example: 1829-CTO).

Custom Model Variant (CMV)
This is a unique configuration that has been negotiated between IBM or Lenovo and the customer. A unique 4-digit MT and 3-digit model is provided to the customer to place orders (Example: 1829-W15). A CMV is a special bid offering. Therefore, it is NOT generally announced.

• The MTM portion of the machine label is the 4-digit MT and 3-digit model, where model = “CTO” (Example: 1829-CTO). The PRODUCT ID portion of the machine label is the 4-digit MT and 3-digit CMV model (Example: 1829-W15).
Important service information

- The PEW record is the 4-digit MT and 3-digit model, where model = “CTO” (Example: 1829-CTO).
- eSupport will show both the CTO and CMV machine type models (Example: 1829-CTO and 1829-W15 will be found on the eSupport site.)
- The HMM will have the 4-digit MT and 3-digit CTO model only (Example: 1829-CTO). Again, CMVs are custom models and are not found in the HMM.

General Announce Variant (GAV)
This is a standard model (fixed configuration). GAVs are announced and offered to all customers. The MTM portion of the machine label is a 4-digit MT and 3-digit model, where model = a “fixed part number”, not “CTO” (Example: 1829-F1U). Also, PEW, eSupport, and the HMM will list these products under the same fixed model number.

FRU identification for CTO, CMV, and GAV products
There are three information resources to identify which FRUs are used to support CTO, CMV, and GAV products. These sources are PEW, eSupport, and the HMM.

Using PEW
- **PEW** is the primary source for identifying FRU part numbers and FRU descriptions for the key commodities for CTO, CMV and GAV products at a MT-serial number level. An example of key commodities are hard disk drives, system boards, microprocessors, Liquid Crystal Displays (LCDs), and memory.
- Remember, all CTO and CMV products are loaded in PEW under the 4-digit MT and 3-digit model, where model = “CTO” (Example: 1829-CTO). GAVs are loaded in PEW under the 4-digit MT and 3-digit model, where model = a “fixed part number”, not “CTO” (Example: 1829-F1U).
- PEW can be accessed at the following Web site: [http://w3-3.ibm.com/pc/entitle](http://w3-3.ibm.com/pc/entitle)
- Select Warranty lookup. Input the MT and the Serial number and the list of key commodities will be returned in the PEW record under COMPONENT INFORMATION.
- **Business Partners** using Eclalm will access PEW when performing Entitlement Lookup. Business Partners will enter Loc ID, MT and Serial, and the key commodities will be returned in the Eclalm record under SYSTEM DETAILS.
- **Authorized IBM Business Partners** can access Eclalm at the following Web site: [https://wca.eclalm.com](https://wca.eclalm.com)

Using eSupport
For Key Commodities (Examples - hard disk drive, system board, microprocessor, LCD, and memory)
- eSupport can be used to view the list of key commodities built in a particular machine serial (this is the same record found in PEW).
- eSupport can be accessed at the following Web site: [http://www.lenovo.com/support](http://www.lenovo.com/support)
- To view the key commodities, click on PARTS INFORMATION, then PARTS LOOKUP. Type in the model type and serial number. The key commodities will be returned in the eSupport record under PARTS SHIPPED WITH YOUR SYSTEM.
Important service information

For the Remaining FRUs (the complete list of FRUs at the MT Model level)

- eSupport can be used to view the complete list of FRUs for a machine type and model.
- To view the complete list of FRUs, type in the machine type and model (Example: 1829-CTO) under QUICK PATH. Under “View by Document Type” select PARTS INFORMATION. Under “Filter by Category” select SERVICE PARTS. Under “Parts Information by Date” select SYSTEM SERVICE PARTS. The list of service parts by description, with applicable machine type model and FRU will be displayed.

Using the HMM

Use the HMM as a back-up to PEW and eSupport to view the complete list of FRUs at the MT Model level.

Important information about replacing RoHS compliant FRUs

RoHS, The Restriction of Hazardous Substances in Electrical and Electronic Equipment Directive (2002/95/EC) is a European Union legal requirement affecting the global electronics industry. RoHS requirements must be implemented on Lenovo products placed on the market and sold in the European Union after June 2006. Products on the market before June 2006 are not required to have RoHS compliant parts. If the original FRU parts are non compliant, replacement parts can also be non compliant. In all cases if the original FRU parts are RoHS compliant the replacement part must also be RoHS compliant.

Note: RoHS and non-RoHS FRU part numbers with the same fit and function are identified with unique FRU part numbers.

Lenovo plans to transition to RoHS compliance well before the implementation date and expects its suppliers to be ready to support Lenovo’s requirements and schedule in the EU. Products sold in 2005 and 2006, will contain some RoHS compliant FRUs. The following statement pertains to these products and any product Lenovo produces containing RoHS compliant FRUs.

RoHS compliant FRUs have unique FRU part numbers. Before or after the RoHS implementation date, failed RoHS compliant parts must always be replaced using RoHS compliant FRUs, so only the FRUs identified as compliant in the system HMM or direct substitutions for those FRUs may be used.

<table>
<thead>
<tr>
<th>Products marketed before June 2006</th>
<th>Products marketed after June 2006</th>
</tr>
</thead>
<tbody>
<tr>
<td>Current or original part</td>
<td>Replacement FRU</td>
</tr>
<tr>
<td>Non-RoHS</td>
<td>Can be Non-RoHS</td>
</tr>
<tr>
<td>Non-RoHS</td>
<td>Can be RoHS</td>
</tr>
<tr>
<td>Non-RoHS</td>
<td>Can sub to RoHS</td>
</tr>
<tr>
<td>RoHS</td>
<td>Must be RoHS</td>
</tr>
</tbody>
</table>

Note: A direct substitution is a part with a different FRU part number that is automatically shipped by the distribution center at the time of the order.
Diskette compatibility matrix

The compatibility of each of the drives with the diskettes for it is as follows:

<table>
<thead>
<tr>
<th>Diskette drive</th>
<th>Diskette capacity</th>
<th>Compatibility</th>
</tr>
</thead>
<tbody>
<tr>
<td>3.5-inch</td>
<td>1.0 MB</td>
<td>Read and write</td>

</tbody>
</table>

Safety notices: multilingual translations

In this manual, safety notices appear in English with a page number reference to the appropriate multilingual, translated safety notice found in this section.

The following safety notices are provided in English, French, German, Hebrew, Italian, and Spanish.

Safety notice 1

Before the computer is powered on after FRU replacement, make sure all screws, springs, and other small parts are in place and are not left loose inside the computer. Verify this by shaking the computer and listening for rattling sounds. Metallic parts or metal flakes can cause electrical shorts.

Avant de remettre l’ordinateur sous tension après remplacement d’une unité en clientèle, vérifiez que tous les ressorts, vis et autres pièces sont bien en place et bien fixées. Pour ce faire, secouez l’unité et assurez-vous qu’aucun bruit suspect ne se produit. Des pièces métalliques ou des copeaux de métal pourraient causer un court-circuit.

Prima di accendere l’elaboratore dopo che è stata effettuata la sostituzione di una FRU, accertarsi che tutte le viti, le molle e tutte le altri parti di piccole dimensioni siano nella corretta posizione e non siano sparse all’interno dell’elaboratore. Verificare ciò scuotendo l’elaboratore e prestando attenzione ad eventuali rumori; eventuali parti o pezzetti metallici possono provocare cortocircuiti pericolosi.

Antes de encender el sistema despues de sustituir una FRU, compruebe que todos los tornillos, muelles y demás piezas pequeñas se encuentran en su sitio y no se encuentran sueltas dentro del sistema. Compruébelo agitando el sistema y escuchando los posibles ruidos que provocarían. Las piezas metálicas pueden causar cortocircuitos eléctricos.
Some standby batteries contain a small amount of nickel and cadmium. Do not disassemble a standby battery, recharge it, throw it into fire or water, or short-circuit it. Dispose of the battery as required by local ordinances or regulations. Use only the battery in the appropriate parts listing. Use of an incorrect battery can result in ignition or explosion of the battery.

Certaines batteries de secours contiennent du nickel et du cadmium. Ne les démontez pas, ne les rechargez pas, ne les exposez ni au feu ni à l'eau. Ne les mettez pas en court-circuit. Pour les mettre au rebut, conformez-vous à la réglementation en vigueur. Lorsque vous remplacez la pile de sauvegarde ou celle de l’horloge temps réel, veillez à n’utiliser que les modèles cités dans la liste de pièces détachées adéquate. Une batterie ou une pile inappropriée risque de prendre feu ou d’exploser.

Alcune batterie di riserva contengono una piccola quantità di nichel e cadmio. Non smontarle, ricaricarle, gettarle nel fuoco o nell’acqua né cortocircitarle. Smaltirle secondo la normativa in vigore (DPR 915/82, successive disposizioni e disposizioni locali). Quando si sostituisce la batteria dell’RTC (real time clock) o la batteria di supporto, utilizzare soltanto i tipi inseriti nell’appropriato Catalogo parti. L’impiego di una batteria non adatta potrebbe determinare l’incendio o l’esplosione della batteria stessa.

Algunas baterías de reserva contienen una pequeña cantidad de níquel y cadmio. No las desmonte, ni recargue, ni las eche al fuego o al agua ni las cortocircuitue. Deséchelas tal como dispone la normativa local. Utilice sólo baterías que se encuentren en la lista de piezas. La utilización de una batería no apropiada puede provocar la ignición o explosión de la misma.
Safety notices

Safety notice 3

⚠️ DANGER

The battery pack contains small amounts of nickel. Do not disassemble it, throw it into fire or water, or short-circuit it. Dispose of the battery pack as required by local ordinances or regulations. Use only the battery in the appropriate parts listing when replacing the battery pack. Use of an incorrect battery can result in ignition or explosion of the battery.

La batterie contient du nickel. Ne la démontez pas, ne l’exposez ni au feu ni à l’eau. Ne la mettez pas en court-circuit. Pour la mettre au rebut, conformez-vous à la réglementation en vigueur. Lorsque vous remplacez la batterie, veillez à n’utiliser que les modèles cités dans la liste de pièces détachées adéquate. En effet, une batterie inappropriée risque de prendre feu ou d’exploser.

La batteria contiene piccole quantità di nichel. Non smontarla, gettarla nel fuoco o nell’acqua né cortocircuitarla. Smaltirla secondo la normativa in vigore (DPR 915/82, successive disposizioni e disposizioni locali). Quando si sostituisce la batteria, utilizzare soltanto i tipi inseriti nell’appropriato Catalogo parti. L’impiego di una batteria non adatta potrebbe determinare l’incendio o l’esplosione della batteria stessa.

Las baterías contienen pequeñas cantidades de níquel. No las desmonte, ni recargue, ni las eche al fuego o al agua ni las cortocircuite. Deséchelas tal como dispone la normativa local. Utilice sólo baterías que se encuentren en la lista de piezas al sustituir la batería. La utilización de una batería no apropiada puede provocar la ignición o explosión de la misma.
Safety notice 4

⚠️ DANGER

The lithium battery can cause a fire, an explosion, or a severe burn. Do not recharge it, remove its polarized connector, disassemble it, heat it above 100°C (212°F), incinerate it, or expose its cell contents to water. Dispose of the battery as required by local ordinances or regulations. Use only the battery in the appropriate parts listing. Use of an incorrect battery can result in ignition or explosion of the battery.

La pile de sauvegarde contient du lithium. Elle présente des risques d’incendie, d’explosion ou de brûlures graves. Ne la rechargez pas, ne retirez pas son connecteur polarisé et ne la démontez pas. Ne l’exposez pas à une température supérieure à 100°C, ne la faites pas brûler et n’en exposez pas le contenu à l’eau. Mettez la pile au rebut conformément à la réglementation en vigueur. Une pile inappropriée risque de prendre feu ou d’exploser.

La batteria di supporto e una batteria al litio e può incendiarsi, esplodere o procurare gravi ustioni. Evitare di ricaricarla, smontarne il connettore polarizzato, smontarla, riscaldarla ad una temperatura superiore ai 100 gradi centigradi, incendiaria o gettarla in acqua. Smaltirla secondo la normativa in vigore (DPR 915/82, successive disposizioni e disposizioni locali). L’impiego di una batteria non adatta potrebbe determinare l’incendio o l’esplosione della batteria stessa.

La batería de repuesto es una batería de litio y puede provocar incendios, explosiones o quemaduras graves. No la recargue, ni quite el conector polarizado, ni la desmonte, ni caliente por encima de los 100°C (212°F), ni la incinere ni exponga el contenido de sus celdas al agua. Deséchela tal como dispone la normativa local.
Safety notices

Safety notice 5

If the LCD breaks and the fluid from inside the LCD gets into your eyes or on your hands, immediately wash the affected areas with water for at least 15 minutes. Seek medical care if any symptoms from the fluid are present after washing.

Si le panneau d'affichage à cristaux liquides se brise et que vous recevez dans les yeux ou sur les mains une partie du fluide, rincez-les abondamment pendant au moins quinze minutes. Consultez un médecin si des symptômes persistent après le lavage.

Si la LCD se rompe y el fluido de su interior entra en contacto con sus ojos o sus manos, lave inmediatamente las áreas afectadas con agua durante 15 minutos como mínimo. Obtenga atención médica si se presenta algún síntoma del fluido después de lavarse.

Safety notice 6

⚠️ DANGER

To avoid shock, do not remove the plastic cover that protects the lower part of the inverter card.

Afin d’éviter tout risque de choc électrique, ne retirez pas le cache en plastique protégeant la partie inférieure de la carte d’alimentation.

Per evitare scosse elettriche, non rimuovere la copertura in plastica che avvolge la parte inferiore della scheda invertitore.

Para evitar descargas, no quite la cubierta de plástico que rodea la parte baja de la tarjeta invertida.
Safety notices

Safety notice 7

⚠️ DANGER

Though the main batteries have low voltage, a shorted or grounded battery can produce enough current to burn personnel or combustible materials.

Bien que le voltage des batteries principales soit peu élevé, le court-circuit ou la mise à la masse d’une batterie peut produire suffisamment de courant pour brûler des matériaux combustibles ou causer des brûlures corporelles graves.

Obwohl Hauptbatterien eine niedrige Spannung haben, können sie doch bei Kurzschluß oder Erdung genug Strom abgeben, um brennbare Materialien zu entzünden oder Verletzungen bei Personen hervorzurufen.

Sebbene le batterie di alimentazione siano a basso voltaggio, una batteria in corto circuito o a massa può fornire corrente sufficiente da bruciare materiali combustibili o provocare ustioni ai tecnici di manutenzione.

Aunque las baterías principales tienen un voltaje bajo, una batería cortocircuitada o con contacto a tierra puede producir la corriente suficiente como para quemar material combustible o provocar quemaduras en el personal.

Safety notice 8

⚠️ DANGER

Before removing any FRU, power off the computer, unplug all power cords from electrical outlets, remove the battery pack, and then disconnect any interconnecting cables.

Avant de retirer une unité remplaçable en clientèle, mettez le système hors tension, débranchez tous les cordons d’alimentation des socles de prise de courant, retirez la batterie et déconnectez tous les cordons d’interface.

Die Stromzufuhr muß abgeschaltet, alle Stromkabel aus der Steckdose gezogen, der Akku entfernt und alle Verbindungskabel abgenommen sein, bevor eine FRU entfernt wird.

Prima di rimuovere qualsiasi FRU, spegnere il sistema, scollegare dalle prese elettriche tutti i cavi di alimentazione, rimuovere la batteria e poi scollegare i cavi di interconnessione.

Antes de quitar una FRU, apague el sistema, desenchufe todos los cables de las tomas de corriente eléctrica, quite la batería y, a continuación, desconecte cualquier cable de conexión entre dispositivos.
The following section presents safety information with which you need to be familiar before you service a ThinkPad computer.

**General safety**

Follow these rules to ensure general safety:

- Observe good housekeeping in the area of the machines during and after maintenance.
- When lifting any heavy object:
  1. Make sure that you can stand safely without slipping.
  2. Distribute the weight of the object equally between your feet.
  3. Use a slow lifting force. Never move suddenly or twist when you attempt to lift.
  4. Lift by standing or by pushing up with your leg muscles; this action removes the strain from the muscles in your back. *Do not attempt to lift any object that weighs more than 16 kg (35 lb) or that you think is too heavy for you.*
- Do not perform any action that causes hazards to the customer, or that makes the equipment unsafe.
- Before you start the machine, make sure that other service representatives and the customer’s personnel are not in a hazardous position.
- Place removed covers and other parts in a safe place, away from all personnel, while you are servicing the machine.
- Keep your toolcase away from walk areas so that other people will not trip over it.
- Do not wear loose clothing that can be trapped in the moving parts of a machine. Make sure that your sleeves are fastened or rolled up above your elbows. If your hair is long, fasten it.
- Insert the ends of your necktie or scarf inside clothing or fasten it with a nonconductive clip, about 8 centimeters (3 inches) from the end.
- Do not wear jewelry, chains, metal-frame eyeglasses, or metal fasteners for your clothing.

**Attention:** Metal objects are good electrical conductors.

- Wear safety glasses when you are hammering, drilling, soldering, cutting wire, attaching springs, using solvents, or working in any other conditions that might be hazardous to your eyes.
- After service, reinstall all safety shields, guards, labels, and ground wires. Replace any safety device that is worn or defective.
- Reinstall all covers correctly before returning the machine to the customer.
- Fan louvers on the machine help to prevent overheating of internal components. Do not obstruct fan louvers or cover them with labels or stickers.

**Electrical safety**

Observe the following rules when working on electrical equipment.
Important

Use only approved tools and test equipment. Some hand tools have handles covered with a soft material that does not insulate you when working with live electrical currents.

Many customers have, near their equipment, rubber floor mats that contain small conductive fibers to decrease electrostatic discharges. Do not use this type of mat to protect yourself from electrical shock.

- Find the room emergency power-off (EPO) switch, disconnecting switch, or electrical outlet. If an electrical accident occurs, you can then operate the switch or unplug the power cord quickly.
- Do not work alone under hazardous conditions or near equipment that has hazardous voltages.
- Disconnect all power before:
  - Performing a mechanical inspection
  - Working near power supplies
  - Removing or installing Field Replaceable Units (FRUs)
- Before you start to work on the machine, unplug the power cord. If you cannot unplug it, ask the customer to power-off the wall box that supplies power to the machine, and to lock the wall box in the off position.
- If you need to work on a machine that has exposed electrical circuits, observe the following precautions:
  - Ensure that another person, familiar with the power-off controls, is near you.
  - Use only one hand when working with powered-on electrical equipment; keep the other hand in your pocket or behind your back.
  - When using testers, set the controls correctly and use the approved probe leads and accessories for that tester.
  - Stand on suitable rubber mats (obtained locally, if necessary) to insulate you from grounds such as metal floor strips and machine frames.

Observe the special safety precautions when you work with very high voltages; Instructions for these precautions are in the safety sections of maintenance information. Use extreme care when measuring high voltages.

- Regularly inspect and maintain your electrical hand tools for safe operational condition.
- Do not use worn or broken tools and testers.
- Never assume that power has been disconnected from a circuit. First, check that it has been powered off.
- Always look carefully for possible hazards in your work area. Examples of these hazards are moist floors, nongrounded power extension cables, power surges, and missing safety grounds.
- Do not touch live electrical circuits with the reflective surface of a plastic dental mirror. The surface is conductive; such touching can cause personal injury and machine damage.
Do not service the following parts *with the power on* when they are removed from their normal operating places in a machine:
- Power supply units
- Pumps
- Blowers and fans
- Motor generators

and similar units. (This practice ensures correct grounding of the units.)

If an electrical accident occurs:
- Use caution; do not become a victim yourself.
- Switch off power.
- Send another person to get medical aid.

Safety inspection guide
The purpose of this inspection guide is to assist you in identifying potentially unsafe conditions. As each machine was designed and built, required safety items were installed to protect users and service personnel from injury. This guide addresses only those items. You should use good judgment to identify potential safety hazards due to attachment of non-ThinkPad features or options not covered by this inspection guide.

If any unsafe conditions are present, you must determine how serious the apparent hazard could be and whether you can continue without first correcting the problem.

Consider these conditions and the safety hazards they present:
- Electrical hazards, especially primary power (primary voltage on the frame can cause serious or fatal electrical shock)
- Explosive hazards, such as a damaged CRT face or a bulging capacitor
- Mechanical hazards, such as loose or missing hardware

To determine whether there are any potentially unsafe conditions, use the following checklist at the beginning of every service task. Begin the checks with the power off, and the power cord disconnected.

Checklist:
1. Check exterior covers for damage (loose, broken, or sharp edges).
2. Power off the computer. Disconnect the power cord.
3. Check the power cord for:
   a. A third-wire ground connector in good condition. Use a meter to measure third-wire ground continuity for 0.1 ohm or less between the external ground pin and the frame ground.
   b. The power cord should be the type specified in the parts list.
   c. Insulation must not be frayed or worn.
4. Check for cracked or bulging batteries.
5. Remove the cover.
6. Check for any obvious non-ThinkPad alterations. Use good judgment as to the safety of any non-ThinkPad alterations.
7. Check inside the unit for any obvious unsafe conditions, such as metal filings, contamination, water or other liquids, or signs of fire or smoke damage.
8. Check for worn, frayed, or pinched cables.
9. Check that the power-supply cover fasteners (screws or rivets) have not been removed or tampered with.

Handling devices that are sensitive to electrostatic discharge

Any computer part containing transistors or integrated circuits (ICs) should be considered sensitive to electrostatic discharge (ESD). ESD damage can occur when there is a difference in charge between objects. Protect against ESD damage by equalizing the charge so that the machine, the part, the work mat, and the person handling the part are all at the same charge.

Notes

1. Use product-specific ESD procedures when they exceed the requirements noted here.
2. Make sure that the ESD protective devices you use have been certified (ISO 9000) as fully effective.

When handling ESD-sensitive parts:

- Keep the parts in protective packages until they are inserted into the product.
- Avoid contact with other people while handling the part.
- Wear a grounded wrist strap against your skin to eliminate static on your body.
- Prevent the part from touching your clothing. Most clothing is insulative and retains a charge even when you are wearing a wrist strap.
- Use the black side of a grounded work mat to provide a static-free work surface. The mat is especially useful when handling ESD-sensitive devices.
- Select a grounding system, such as those listed below, to provide protection that meets the specific service requirement.

Note

The use of a grounding system to guard against ESD damage is desirable but not necessary.

- Attach the ESD ground clip to any frame ground, ground braid, or green-wire ground.
- When working on a double-insulated or battery-operated system, use an ESD common ground or reference point. You can use coax or connector-outside shells on these systems.
- Use the round ground prong of the ac plug on ac-operated computers.

Grounding requirements

Electrical grounding of the computer is required for operator safety and correct system function. Proper grounding of the electrical outlet can be verified by a certified electrician.
Laser compliance statement

Some models of ThinkPad computer are equipped from the factory with an optical storage device such as a CD-ROM drive or a DVD-ROM drive. Such devices are also sold separately as options. If one of these drives is installed, it is certified in the U.S. to conform to the requirements of the Department of Health and Human Services 21 Code of Federal Regulations (DHHS 21 CFR) Subchapter J for Class 1 laser products. Elsewhere, the drive is certified to conform to the requirements of the International Electrotechnical Commission (IEC) 825 and CENELEC EN 60825 for Class 1 laser products.

If a CD-ROM drive, a DVD-ROM drive, or another laser device is installed, note the following:

⚠️ CAUTION:

- Use of controls or adjustments or performance of procedures other than those specified herein might result in hazardous radiation exposure.
- Opening the CD-ROM drive, the DVD-ROM drive, or any other optical storage device could result in exposure to hazardous laser radiation. There are no serviceable parts inside those drives. Do not open.
Laser compliance statement

A CD-ROM drive, a DVD-ROM drive, or any other storage device installed may contain an embedded Class 3A or Class 3B laser diode. Note the following:

⚠️ DANGER

Emits visible and invisible laser radiation when open. Do not stare into the beam, do not view directly with optical instruments, and avoid direct exposure to the beam.

Radiação por raio laser ao abrir. Não olhe fixo no feixe de luz, não olhe diretamente por meio de instrumentos óticos e evite exposição direta com o feixe de luz.

开启时会有激光发射时，请勿盯视激光光束，请勿直接查看激光仪器，并且避免直接接触在激光光束之中。

Rayonnement laser si carter ouvert. Évitez de fixer le faisceau, de le regarder directement avec des instruments optiques, ou de vous exposer au rayon.

Kinyitáskor lézersugár! Ne nézzen bele se szabad szemmel, se optikai eszközökkel. Kerülje a sugárnyalábbal való érintkezést!

Aprendo l’unità vengono emesse radiazioni laser. Non fissare il fascio, non guardarlo direttamente con strumenti ottici e evitare l’esposizione diretta al fascio.

Открывая, берегитесь лазерного излучения. Не смотрите на луч, не разглядывайте его с помощью оптических инструментов, а также избегайте прямого воздействия лазерного луча.

Keď je laserová jednotka otvorená. Vyhnite sa priamemu pohľadu a nehládejte priamo s optickými nástrojmi do lúča a vyhnite sa priamemu vystaveniu účinkom.

Radiación láser al abrir. No mire fijamente ni examine con instrumental óptico el haz de luz. Evite la exposición directa al haz.
General descriptions

The descriptions in this chapter apply to any ThinkPad model that has the PC-Doctor® for DOS diagnostics program. Some descriptions might not apply to your particular computer.

Read this first

Before you go to the checkout guide, be sure to read this section.

Important notes

- Only certified trained personnel should service the computer.
- Before replacing any FRU, read the entire page on removing and replacing FRUs.
- When you replace FRUs, use new nylon-coated screws.
- Be extremely careful during such write operations as copying, saving, or formatting. Drives in the computer that you are servicing sequence might have been altered. If you select an incorrect drive, data or programs might be overwritten.
- Replace a FRU only with another FRU of the correct model. When you replace a FRU, make sure that the model of the machine and the FRU part number are correct by referring to the FRU parts list.
- A FRU should not be replaced because of a single, un-reproducible failure. Single failures can occur for a variety of reasons that have nothing to do with a hardware defect, such as cosmic radiation, electrostatic discharge, or software errors. Consider replacing a FRU only when a problem recurs. If you suspect that a FRU is defective, clear the error log and run the test again. If the error does not recur, do not replace the FRU.
- Be careful not to replace a nondefective FRU.

What to do first

When you do return a FRU, you must include the following information in the parts exchange form or parts return form that you attach to it:

__1. Name and phone number of servicer
__2. Date of service
__3. Date on which the machine failed
__4. Date of purchase
__5. Failure symptoms, error codes appearing on the display, and beep symptoms
__6. Procedure index and page number in which the failing FRU was detected
__7. Failing FRU name and part number
__8. Machine type, model number, and serial number
__9. Customer’s name and address

Note for warranty:
During the warranty period, the customer may be responsible for repair costs if the computer damage was caused by misuse, accident, modification, unsuitable physical or operating environment, or improper maintenance by the customer.
Following is a list of some common items that are not covered under warranty and some symptoms that might indicate that the system was subjected to stress beyond normal use.

Before checking problems with the computer, determine whether the damage is covered under the warranty by referring to the following list:

**The following are not covered under warranty:**
- LCD panel cracked from the application of excessive force or from being dropped
- Scratched (cosmetic) parts
- Distortion, deformation, or discoloration of the cosmetic parts
- Plastic parts, latches, pins, or connectors that have been cracked or broken by excessive force
- Damage caused by liquid spilled into the system
- Damage caused by the improper insertion of a PC Card or the installation of an incompatible card
- Improper disc insertion or use of an optical drive
- Diskette drive damage caused by pressure on the diskette drive cover, foreign material in the drive, or the insertion of a diskette with multiple labels
- Damaged or bent diskette eject button
- Fuses blown by attachment of a nonsupported device
- Forgotten computer password (making the computer unusable)
- Sticky keys caused by spilling a liquid onto the keyboard
- Use of an incorrect AC adapter on laptop products

**The following symptoms might indicate damage caused by nonwarranted activities:**
- Missing parts might be a symptom of unauthorized service or modification.
- If the spindle of a hard disk drive becomes noisy, it may have been subjected to excessive force, or dropped.
Related service information

This section provides information about the following:
- “Service Web site”
- “Restoring the factory contents by using Product Recovery discs”
- “Passwords” on page 22
- “Power management” on page 24

Service Web site

When the latest maintenance diskette and the system program service diskette become available, they will be posted on [http://www.lenovo.com/spm](http://www.lenovo.com/spm)

Restoring the factory contents by using Product Recovery discs

When the hard disk drive is replaced because of a failure, no Product Recovery program is on the new hard disk. In this case, you must use the recovery discs for the computer. Order the recovery discs and the hard disk drive at the same time so that you can recover the new hard disk drive with the pre-installed software when they arrive. For information on which discs to order, see “Recovery discs” on page 110.

To install the factory contents by using Product Recovery discs, do the following:

Note
The recovery process might take up to 2 hours.

1. Insert the Rescue and Recovery™ Disk1 of 1 into the optical drive, then restart the computer. This will take several minutes.
2. When the “Welcome to Rescue and Recovery” screen is displayed, press Continue. In the Rescue and Recovery menu, select Restore Your System. A message giving a warning that USB devices used in recovery must be connected when the computer is turned on appears. Click OK.
3. “Restore Your System” window appears. Select Restore my hard drive to the original factory state, and click Next. A warning appears, click Yes. Then next menu appears. Select I do not want to save any files and click Next. Following menu appears with a warning, select Next. A warning appears not to power down the computer during the recovery process. Click OK. One more warning appears saying that recovery is intended only for unrecoverable system problems. Click OK.
4. The Terms and Conditions window appears, select I accept these terms and conditions and press OK. Previous menus may remain on the screen, but the Predesktop installer begins copying files. When this completes, the computer will restart and a window will ask you to insert a Product Recovery Supplemental Disk, if you have one. Press No.
5. You will then be prompted to insert Product Recovery Disk 1 into the optical drive. Insert the Product Recovery Disk 1 into the optical drive, and press OK. In similar fashion, you will be prompted to insert the remaining recovery discs until all the files are copied.
6. After all the files are copied, the computer will restart and return to the “Welcome to Rescue and Recovery” screen where a window “Recovering your system, this may take several minutes” appears and .IMZ files are processed.
A total progress bar allows you to audit this process, which will take about 8 minutes. The final recovery disc may be safely removed during this time, but may also be left in the optical drive since it is not bootable.

7. You will then be prompted to restart the computer. Select Yes. A warning window appears, giving you one last chance to stop the restart, but disappears automatically after about 5 seconds. File processing continues in DOS full screen mode for about two minutes and the computer restarts to the Windows® desktop. No user intervention is required (and should be avoided) after this point.

8. Windows setup continues on the desktop and DOS window for IBM system setup, with progress measured by a Factory Preinstallation window on the right side of the screen. The processes are updating installed softwares.
   A warning that antivirus software is not installed appears repeatedly in the system tray, but this should be ignored. The entire process at desktop takes about 25 minutes.

9. Then the computer restarts, does some more DOS full screen processing, and restarts again to a Windows desktop where factory preinstallation continues for about 12 more minutes, another restart to a DOS screen and then back to the Windows splash screen and back to the desktop for more preinstallation.
   This lasts about 10 more minutes and the computer restarts to do NTFS conversion and then restarts to the OOBE (Out of Box Experience) environment.

**Passwords**

As many as three passwords may be needed for any ThinkPad computer: the power-on password (POP), the hard-disk password (HDP), and the supervisor password (SVP).

If any of these passwords has been set, a prompt for it appears on the screen whenever the computer is turned on. The computer does not start until the password is entered.

**Exception:** If only an SVP is installed, the password prompt does not appear when the operating system is booted.

**Power-on password:**
A power-on password (POP) protects the system from being powered on by an unauthorized person. The password must be entered before an operating system can be booted.

**Hard-disk password:**
There are two hard-disk passwords (HDPs):
- User HDP—for the user
- Master HDP—for the system administrator, who can use it to get access to the hard disk even if the user has changed the user HDP

**Note:** There are two modes for the HDP: **User only** and **Master + User**. The **Master + User** mode requires two HDPs; the system administrator enters both in the same operation. The system administrator then provides the user HDP to the system user.
Attention: If the user HDP has been forgotten, check whether a master HDP has been set. If it has, it can be used for access to the hard disk drive. If no master HDP is available, neither Lenovo nor Lenovo authorized servicers provide any services to reset either the user or the master HDP, or to recover data from the hard disk drive. The hard disk drive can be replaced for a scheduled fee.

Supervisor password:
A supervisor password (SVP) protects the system information stored in the BIOS Setup Utility. The user must enter the SVP in order to get access to the BIOS Setup Utility and change the system configuration.

Attention: If the SVP has been forgotten and cannot be made available to the servicer, there is no service procedure to reset the password. The system board must be replaced for a scheduled fee.

How to remove the power-on password
To remove a POP that you have forgotten, do the following:

(A) If no SVP has been set:
1. Turn off the computer.
2. Remove the battery pack.
   For how to remove the battery pack, see “1010 Battery pack” on page 55.
3. Remove the backup battery.
   For how to remove the backup battery, see “1080 Backup battery” on page 68.
4. Turn on the computer and wait until the POST ends.
   After the POST ends, the password prompt does not appear. The POP has been removed.
5. Reinstall the backup battery and the battery pack.

(B) If an SVP has been set and is known by the servicer:
1. Turn on the computer; then, while the “To interrupt normal startup, press the blue ThinkVantage button” message is displayed at the lower-left of the screen, press the ThinkVantage® button. The Rescue and Recovery screen opens.
   For models supporting the Passphrase function, press F1 while the POP icon is appearing on the screen; then enter the POP. For the other models, enter the POP.

   Note: To check whether the ThinkPad computer supports the Passphrase function, enter the BIOS Setup Utility and go to Security --> Password.
   If the Using Passphrase item is displayed in the menu, this function is available on the ThinkPad computer.
2. Click Access BIOS. The system Restart Required window is displayed.
3. Click Yes. The computer restarts, and the BIOS Setup Utility screen opens.
4. Select Security, using the cursor directional keys to move down the menu.
5. Select Password.
7. Type the current SVP in the Enter Current Password field. then leave the Enter New Password field blank, and press Enter twice.
8. In the Changes have been saved window, press Enter.
9. Press F10; then, in the Setup confirmation window, select Yes.
Related service information

How to remove the hard-disk password

Attention: If User only mode is selected and the user HDP has been forgotten and cannot be made available to the servicer, neither Lenovo nor Lenovo authorized servicers provide any services to reset the user HDPs or to recover data from the hard disk drive. The hard disk drive can be replaced for a scheduled fee.

To remove a user HDP that has been forgotten, when the SVP and the master HDP are known, do the following:

1. Turn on the computer; then, while the “To interrupt normal startup, press the blue ThinkVantage button” message is displayed at the lower-left of the screen, press the ThinkVantage button. The Rescue and Recovery screen opens.
   For models supporting the Passphrase function, press F1 while HDP icon is appearing on the screen; then enter the master HDP. For the other models, enter the master HDP.

   Note: To check whether the ThinkPad computer supports the Passphrase function, enter the BIOS Setup Utility and go to Security --> Password. If Using Passphrase item is displayed in the menu, this function is available on the ThinkPad computer.

2. Click Access BIOS. The system Restart Required window is displayed.
3. Click Yes. The computer restarts, and the BIOS Setup Utility screen opens.
4. Select Security, using the cursor directional keys to move down the menu.
5. Select Password.
6. Select Hard-disk x password, where x is the letter of the hard disk drive. A pop-up window opens.
7. Select Master HDP.
8. Type the current master HDP in the Enter Current Password field. then leave the Enter New Password field blank, and press Enter twice.
10. Select Yes in the Setup Configuration window.
   Both user HDP and master HDP will have been removed.

Power management

To reduce power consumption, the computer has three power management modes: screen blank, standby, and hibernation.

Screen blank mode

If the time set on the “Turn off monitor” timer in the operating system expires, the LCD backlight turns off.

To put the computer into screen blank mode, press the ThinkVantage button and use the ThinkVantage Productivity Center.

To end screen blank mode and resume normal operation, press any key.

Standby mode

When the computer enters standby mode, the following events occur in addition to what occurs in screen blank mode:

• The LCD is powered off.
• The hard disk drive is powered off.
• The CPU stops.
To enter standby mode, press Fn+F4.

**Note:** If you are using the ACPI operating system, you can change the action of Fn+F4.

In certain circumstances, the computer goes into standby mode automatically:
- If a “suspend time” has been set on the timer, and the user does not do any operation with the keyboard, the TrackPoint, the hard disk, the parallel connector, or the diskette drive within that time.
- If the battery indicator blinks orange, indicating that the battery power is low. (Alternatively, if **Hibernate when battery becomes low** has been selected in the “Power Management Properties” window, the computer goes into hibernation mode.)

**Note for the APM operating system:**
Even if you do not set the low-battery alarm, the charge indicator notifies you when the battery is low, and then the computer enters the power-saving mode automatically. This default low-battery behavior is independent of the operating system; so if you have set the low-battery alarm, the computer may not do what you specified. It chooses either your setting or the default setting, whichever is appropriate.

If you are using the ACPI operating system, only the low-battery alarm is available.

To cause the computer to return from standby mode and resume operation, do one of the following:
- Press the Fn key.
- Open the LCD cover.
- Turn on the power switch.

Also, in either of the following events, the computer automatically returns from standby mode and resumes operation:
- The ring indicator (RI) is signaled by a serial device or a PC Card device.
- The time set on the resume timer elapses.

**Note:** The computer does not accept any input immediately after it enters standby mode. Wait a few seconds before taking any action to reenter operation mode.

**Hibernation mode**
In hibernation mode, the following occurs:
- The system status, RAM, VRAM, and setup data are stored on the hard disk.
- The system is powered off.

**Note:** If the computer enters the hibernation mode while it is docked to the ThinkPad Advanced Dock or ThinkPad Advanced Mini Dock, do not undock it before resuming normal operation. If you do undock it and then try to resume normal operation, you will get an error message, and you will have to restart the system.

To cause the computer to enter hibernation mode, do any of the following:
- Press the Fn+F12 keys.
Related service information

- If you are using the APM operating system and have set the mode to Power switch mode [Hibernation], turn off the power switch.
- If you are using the ACPI operating system and have defined one of the following actions as the event that causes the system to go into hibernation mode, perform that action.
  - Closing the lid.
  - Pressing the power button.
  - Pressing Fn+F4 keys.

Also, the computer goes into hibernation mode automatically in either of the following conditions:
- If a “hibernation time” has been set on the timer, and if the user does not do any operation with the keyboard, the TrackPoint, the hard disk drive, the parallel connector, or the diskette drive within that time.
- If the timer conditions are satisfied in suspend mode.
- If you are using the APM operating system and have set the mode to Hibernate when battery becomes low, and the battery charge becomes critically low.

When the power is turned on, the computer returns from hibernation mode and resumes operation. The hibernation file in the boot record on the hard disk drive is read, and system status is restored from the hard disk drive.
Checkout guide

Use the following procedures as a guide in identifying and correcting problems with the ThinkPad computer.

**Note:** The diagnostic tests are intended to test only ThinkPad products. The use of non-ThinkPad products, prototype cards, or modified options can lead to false indications of errors and invalid system responses.
1. Identify the failing symptoms in as much detail as possible.
2. Verify the symptoms. Try to re-create the failure by running the diagnostic test or by repeating the operation.

**Testing the computer**

The ThinkPad computer has a test program called PC-Doctor for DOS (hereafter called *PC-Doctor*) You can detect errors by running the diagnostics test included in PC-Doctor. This section is an overview of the procedure. For details that depend on model-unique functions, refer to "Product overview" on page 34.

For some possible configurations of the computer, PC-Doctor might not run correctly. To avoid this problem, you need to initialize the computer setup by use of the BIOS Setup Utility before you run PC-Doctor. On the BIOS Setup Utility screen, press F9, Enter, F10, and then Enter.

**Note:** When you initialize the computer configuration, some devices are disabled, such as the serial port. If you test one of these devices, you will need to enable it by using Configuration utility for DOS. The utility is available on the following Web site: [http://www.lenovo.com/support](http://www.lenovo.com/support)

PC-Doctor cannot be used to test a device that is in the ThinkPad Advanced Dock, even if the computer supports the ThinkPad Advanced Dock. To test a USB device, connect it to the USB connector of the computer.

**Creating the PC-Doctor diagnostics diskette**

To create the PC-Doctor disk from the Rescue and Recovery workspace, do as follows:
1. Enter the Rescue and Recovery workspace by pressing the ThinkVantage button during POST.
2. When the Rescue and Recovery workspace finishes loading, click *Diagnostic Diskette*.
3. Authenticating the digital signature takes about 15 seconds; then the ThinkPad computer will reboot into PC-DOS.
4. A batch file automatically starts up to prompt you through the process of creating diskettes. You are notified of how many diskettes you will need.
   a. You are prompted to insert each diskette in sequence.
   b. Typically, all you need to do is to press the Enter key for the floppy drive; the system then formats and creates the diskette.
   c. Each diskette is erased and formatted with the PC-Doctor for DOS boot image.
5. Once all the diskettes have been created, the ThinkPad computer will reboot. The user is asked to remove all diskettes from the drive, or to insert the first diskette created if it is desired to run the diagnostics.
To run the test, do as follows:

**Note:** In the following procedure, you can select an item not only with the arrow keys, but also with the TrackPoint pointer. Instead of pressing Enter, click the left button.

1. Insert the PC-Doctor disk into the diskette drive; then power on the computer.
   - If the computer cannot be powered on, go to "Power system checkout" on page 30, and check the power sources.
   - If an error code appears, go to "Symptom-to-FRU index" on page 43.

   On the first screen, select the model and press Enter. Follow the instructions on the screen.

2. The main panel of PC-Doctor appears.

3. Select **Diagnostics** with the arrow keys, and press Enter.
   - A pull-down menu appears. (Its exact form depends on the model.)

   **Note:** PC-Doctor menu does not mean the formal support device list. Some unsupported device names may appear in the PC-Doctor menu.
The options on the test menu are as follows:

<table>
<thead>
<tr>
<th>Diagnostics</th>
<th>Interactive Tests</th>
</tr>
</thead>
<tbody>
<tr>
<td>• Run Normal Test</td>
<td>• Keyboard</td>
</tr>
<tr>
<td>• Run Quick Test</td>

</tbody>
</table>

Notes:
• In the **Keyboard** test in **Interactive Tests**, the Fn key should be held down for at least 2 seconds; otherwise, it cannot be sensed.
• **Video Adapter** test supports only the LCD display on the ThinkPad computer. If you have an external monitor attached to your computer, detach it before running PC-Doctor for DOS.
• To test **Digital Signature Chip**, the security chip must be set to Active.

4. Run the applicable function test.
5. Follow the instructions on the screen. If there is a problem, PC-Doctor shows messages describing it.
6. To exit the test, select **Quit — Exit Diag**.
   To cancel the test, press Esc.

**Note:** After running PC-Doctor, check the time and date on the system and reset them if they are incorrect.

**Detecting system information with PC-Doctor**

PC-Doctor can detect the following system information:

**Hardware Info**
• System Configuration
• Memory Contents
• Physical Disk Drives
• Logical Disk Drives
• VGA Information
• IDE Drive Info
• PCI Information
• PNPISA Info
• SMBIOS Info
• VESA LCD Info
• Hardware Events Log
**Utility**
- Run External Tests
- Surface Scan Hard Disk
- Benchmark System
- DOS Shell
- Tech Support Form
- Battery Rundown
- View Test Log
- Print Log
- Save Log
- Full Erase Hard Drive
- Quick Erase Hard Drive

**PC-Doctor for Windows**
This product is designed to help you troubleshoot and resolve problems related to your computer. Select one of the categories listed below to display symptoms and solutions:
- CHECK SYSTEM HEALTH
- SYSTEM AND DEVICE TESTS
- LENOVO TROUBLESHOOTING CENTER
- SYSTEM REPORTS
- UPDATES AND SUPPORT

**Power system checkout**
To verify a symptom, do the following:
1. Turn off the computer.
2. Remove the battery pack.
3. Connect the ac adapter.
4. Check that power is supplied when you turn on the computer.
5. Turn off the computer.
6. Disconnect the ac adapter and install the charged battery pack.
7. Check that the battery pack supplies power when you turn on the computer.

If you suspect a power problem, see the appropriate one of the following power supply checkouts:
- "Checking the ac adapter"
- "Checking operational charging" on page 31
- "Checking the battery pack" on page 31
- "Checking the backup battery" on page 32

**Checking the ac adapter**
You are here because the computer fails only when the ac adapter is used.
- If the power problem occurs only when the ThinkPad Essential Port Replicator is used, replace the port replicator.
- If the power-on indicator does not turn on, check the power cord of the ac adapter for correct continuity and installation.
- If the computer does not charge during operation, go to "Checking operational charging."

To check the ac adapter, do the following:
1. Unplug the ac adapter cable from the computer.
2. Measure the output voltage at the plug of the ac adapter cable. See the following figure:
Note: Output voltage of pin no.2 of the ac adapter may different from the one you are servicing.
3. If the voltage is not correct, replace the ac adapter.
4. If the voltage is acceptable, do the following:
   • Replace the system board.
   • If the problem persists, go to "Product overview" on page 34.

Note: Noise from the ac adapter does not always indicate a defect.

Checking operational charging
To check whether the battery charges properly during operation, use a discharged battery pack or a battery pack that has less than 50% of the total power remaining when installed in the computer.

Perform operational charging. If the battery status indicator or icon does not turn on, remove the battery pack and let it return to room temperature. Reinstall the battery pack. If the charge indicator or icon still does not turn on, replace the battery pack.

If the charge indicator still does not turn on, replace the system board. Then reinstall the battery pack. If it is still not charged, go to the next section.

Checking the battery pack
Battery charging does not start until the Power Meter shows that less than 95% of the total power remains; under this condition the battery pack can charge to 100% of its capacity. This protects the battery pack from being overcharged or from having a shortened life.

To check your battery, move your cursor to the Power Meter icon in the icon tray of the Windows taskbar and wait for a moment (but do not click), and the percentage of battery power remaining is displayed. To get detailed information about the battery, double-click the Power Meter icon.

Note: If the battery pack becomes hot, it may not be able to charge. Remove it from the computer and leave it at room temperature for a while. After it cools down, reinstall and recharge it.

To check the battery pack, do the following:
1. Power off the computer.
2. Remove the battery pack and measure the voltage between battery terminals 1 (+) and 5 (−). See the following figure:
3. If the voltage is less than +14.4 V dc, the battery pack has been discharged.

   **Note:** Recharging will take at least 3 hours, even if the indicator does not turn on.
   If the voltage is still less than +14.4 V dc after recharging, replace the battery.

4. If the voltage is more than +14.4 V dc, measure the resistance between battery terminals 4 and 5. The resistance must be 4 to 30 KΩ.
   If the resistance is not correct, replace the battery pack. If the resistance is correct, replace the system board.

**Checking the backup battery**

Do the following:
1. Power off the computer, and unplug the ac adapter from it.
2. Turn the computer upside down.
3. Remove the battery pack (see "1010 Battery pack" on page 55).
4. Remove the backup battery (see "1080 Backup battery" on page 68).
5. Measure the voltage of the backup battery. See the following figure.

   - If the voltage is correct, replace the system board.
   - If the voltage is not correct, replace the backup battery.
   - If the backup battery discharges quickly after replacement, replace the system board.
Product overview

This section presents the following product-unique information:
- “Specifications” on page 36
- “Status indicators” on page 38
- “FRU tests” on page 38
- “Fn key combinations” on page 40

Specifications

The following table lists the specifications of the ThinkPad Reserve Edition:

<table>

Status indicators

The system status indicators show the status of the computer, as follows:

<table>
<thead>
<tr>
<th>Indicator</th>
<th>Meaning</th>
</tr>
</thead>
<tbody>
<tr>
<td>1 Wireless status</td>
<td><strong>Green:</strong> The wireless feature (the IEEE 802.11 standard or IEEE 802.11n) is on, and the radio link is ready for use. <strong>Blinking green:</strong> Data is being transmitted.</td>
</tr>
<tr>
<td>2 Bluetooth status</td>
<td><strong>Green:</strong> Bluetooth wireless is operational. This indicator is on when Bluetooth wireless is on and not in suspend mode.</td>
</tr>
<tr>
<td>3 Wireless WAN status</td>
<td><strong>Green:</strong> The wireless WAN is on, and the radio link is ready for use. <strong>Blinking green:</strong> Data is being transmitted.</td>
</tr>
<tr>
<td>4 Num lock</td>
<td><strong>Green:</strong> The numeric keypad on the keyboard is enabled. To enable or disable the keypad, press and hold the Shift key, and press the NumLk (ScrLk) key.</td>
</tr>
</tbody>
</table>

</table>
| Diskette drive          | 1. Diagnostics → Diskette Drives  
                          | 2. Interactive Tests → Diskette                                                                                                                                                                                |
| Memory                  | 1. If two DIMMs are installed, remove one of them and run Diagnostics → Memory Test—Quick.  
                          | 2. If the problem does not recur, return the DIMM to its place, remove the other one, and run the test again.  
                          | 3. If the test does not detect the error, run Diagnostics → Memory Test—Full.                                                                                                                                |
| Fan                     | 1. Turn on the computer and check the air turbulence at the louver near the PC Card slot.  
                          | 2. Run Diagnostics → ThinkPad Devices → Fan.                                                                                                                                                                  |
| TrackPoint or pointing  | If the TrackPoint does not work, check the configuration as specified in the BIOS Setup Utility. If the TrackPoint is disabled, select Automatic to enable it.  
                          | device | After you use the TrackPoint, the pointer may drift on the screen for a short time. This drift can occur when a slight, steady pressure is applied to the TrackPoint pointer. This symptom is not a hardware problem. If the pointer stops after a short time, no service action is necessary.  
                          | | If enabling the TrackPoint does not correct the problem, continue with the following:  
                          | | • Interactive Tests → Mouse                                                                                                                                                                                 |
### Fn key combinations

The following table shows the function of each combination of Fn with a function key.

<table>
<thead>
<tr>
<th>Key combination</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>Fn+F1</td>
<td>Reserved.</td>
</tr>
<tr>
<td>Fn+F2</td>
<td>Reserved.</td>
</tr>
</tbody>
</table>
| Fn+F3           | Select a power scheme that has been created by Power Manager. When you press this combination, a panel for selecting a power scheme appears.  
Notes:  
1. To use the Fn+F3 key combination, you must have the ThinkPad PM device driver installed on the computer.  
2. If you have logged on with an administrator user ID, and you press Fn+F3, the panel for selecting a power scheme appears. If you have logged on with another user ID, and you press Fn+F3, the panel does not appear.  
3. You cannot turn off the computer display by pressing Fn+F3. |
| Fn+F4           | Put the computer in standby mode. To return to normal operation, press the Fn key only, without pressing a function key.  
Notes:  
1. To use the Fn+F4 key combination, you must have the ThinkPad PM device driver installed on the computer.  
2. This combination of keys also functions as a sleep button. If you want to use the combination to put the computer into hibernation mode or shut the computer down, change the settings in the Power Manager. |
| Fn+F5           | Enable or disable the built-in wireless networking features and the Bluetooth features. If you press Fn+F5, a list of wireless features is displayed. You can quickly change the power state of each feature in the list.  
Note: If you want to use Fn+F5 to enable the feature specified in IEEE standard 802.11, the following device drivers must be installed on the computer beforehand:  
• ThinkPad Power Management driver  
• OnScreen Display Utility  
• Wireless device drivers |
| Fn+F6           | Reserved.   |

<table>
<thead>
<tr>
<th>Key combination</th>
<th>Description</th>
</tr>
</thead>
</table>
| Fn+F7           | Apply a presentation scheme directly, with no need to start Presentation Director.  
To disable this function and use the Fn+F7 key combination for switching a display output location, start Presentation Director, and change the settings.  
Switch a display output location  
• External monitor (CRT display)  
• Computer display and external monitor (LCD + CRT display)  
• Computer display (LCD)  
Notes:  
1. This function is not supported if different desktop images are displayed on the computer display and the external monitor (the Extend desktop function).  
2. This function does not work while a DVD movie or a video clip is playing.  
To enable this function, start Presentation Director, and change the Fn+F7 settings.  
Note: Multiple users can log on to a single operating system by using different user IDs. Each user needs to change the settings. |
| Fn+F8           | Change the settings of the UltraNav pointing device. |
| Fn+F9           | Open the ThinkPad EasyEject Utility screen. Buttons for the following choices are displayed:  
• **Eject ThinkPad PC from Dock**: This button is displayed only if the ThinkPad computer has been attached to a ThinkPad Advanced Dock or a ThinkPad Advanced Mini Dock. The computer can be detached from the ThinkPad Advanced Dock or the ThinkPad Advanced Mini Dock.  
• **Eject ThinkPad PC from Mini Dock**: This button is displayed only if the ThinkPad computer has been attached to a ThinkPad Essential Port Replicator and one or more USB devices have been connected to the ThinkPad Essential Port Replicator. You can stop and remove all the USB devices safely by clicking the button.  
**Note**: You cannot use this Utility to detach the computer from the ThinkPad Essential Port Replicator.  
• **Run EasyEject Actions**: This button is used to select, stop, or remove external devices connected to the ThinkPad computer.  
• **Configure EasyEject Actions**: Opens the ThinkPad EasyEject Utility main window.  
• **Fn+F9 Settings**: Configures the settings for the Fn+F9 function. |

Symptom-to-FRU index

The symptom-to-FRU index in this section lists symptoms and errors and their possible causes. The most likely cause is listed first, in boldface type.

**Note:** Do the FRU replacement or other actions in the sequence shown in the column headed “FRU or action, in sequence.” If replacing a FRU does not solve the problem, put the original part back in the computer. Do not replace a nondefective FRU.

This index can also help you determine, during regular servicing, what FRUs are likely to need to be replaced next.

A numeric error is displayed for each error detected in POST or system operation. In the displays, n can be any number.

If no numeric code is displayed, check the narrative descriptions of symptoms. If the symptom is not described there, go to “Intermittent problems” on page 50.

**Note**

For a device not supported by diagnostic codes in the ThinkPad notebook computers, see the manual for that device.

### Numeric error codes

**Important**

The TFT LCD for the notebook computer contains many thin-film transistors (TFTs). The presence of a small number of dots that are missing, discolored, or always lighted is characteristic of TFT LCD technology, but excessive pixel problems can cause viewing concerns. The LCD should be replaced if the number of missing, discolored, or lighted dots in any background is:

- **XGA:** 8 or more bright dots, 8 or more dark dots, or a total of 9 or more bright and dark dots.

**Note:** A bright dot means a pixel is always on (white or color.) A dark dot means a pixel is always off (black color.)

Intermittent problems

Intermittent system hang problems can be due to a variety of causes that have nothing to do with a hardware defect, such as cosmic radiation, electrostatic discharge, or software errors. FRU replacement should be considered only when a problem recurs.

When analyzing an intermittent problem, do the following:
1. Run the diagnostic test for the system board in loop mode at least 10 times.
2. If no error is detected, do not replace any FRUs.
3. If any error is detected, replace the FRU shown by the FRU code. Rerun the test to verify that no more errors exist.

Undetermined problems

If the diagnostic tests did not identify the adapter or device that has failed, if wrong devices are installed, or if the system simply is not operating, follow these procedures to isolate the failing FRU (do not isolate FRUs that have no defects).

Verify that all attached devices are supported by the computer.

Verify that the power supply being used at the time of the failure is operating correctly. (See “Power system checkout” on page 30.)
1. Turn off the computer.
2. Visually check each FRU for damage. Replace any damaged FRU.
3. Remove or disconnect all of the following devices:
   a. Non-ThinkPad devices
   b. Devices attached to the port replicator
   c. Printer, mouse, and other external devices
   d. Battery pack
   e. Hard disk drive
   f. External diskette drive or optical drive
   g. DIMM
   h. Optical disk or diskette in the internal drive
   i. PC Cards
4. Turn on the computer.
5. Determine whether the problem has been solved.
6. If the problem does not recur, reconnect the removed devices one at a time until you find the failing FRU.
7. If the problem remains, replace the following FRUs one at a time (do not replace a nondefective FRU):
   a. System board
   b. LCD assembly
FRU replacement notices

This section contains notices related to removing and replacing parts. Read this section carefully before replacing any FRU.

Screw notices

Loose screws can cause a reliability problem. In the ThinkPad computer, this problem is addressed with special nylon-coated screws that have the following characteristics:
- They maintain tight connections.
- They do not easily come loose, even with shock or vibration.
- They are harder to tighten.
- Each one should be used only once.

Do the following when you service this machine:
- Keep the screw kit (for the P/N, see “Miscellaneous parts” on page 111) in your tool bag.
- Always use new screws.
- Use a torque screwdriver if you have one.

Tighten screws as follows:
- **Plastic to plastic**
  Turn an additional 90 degrees after the screw head touches the surface of the plastic part:

  ![Cross-section of plastic to plastic screw]

- **Logic card to plastic**
  Turn an additional 180 degrees after the screw head touches the surface of the logic card:

  ![Cross-section of logic card to plastic screw]

- **Torque driver**
  If you have a torque driver, refer to the “Torque” column for each step.
  Make sure that you use the correct screw. If you have a torque screwdriver, tighten all screws firmly to the torque shown in the table. **Never use a screw that you removed. Use a new one. Make sure that all of the screws are tightened firmly.**
  - Ensure torque screwdrivers are calibrated correctly following country specifications.

Retaining serial numbers

This section includes the following descriptions:
- “Restoring the serial number of the system unit” on page 52
FRU replacement notices

- "Retaining the UUID"
- "Reading or writing the ECA information"

Restoring the serial number of the system unit
When the computer was manufactured, the EEPROM on the system board was loaded with the serial numbers of the system and all major components. These numbers need to remain the same throughout the life of the computer.

If you replace the system board, you must restore the serial number of the system unit to its original value.

Before replacing the system board, save the original serial number by doing the following:
1. Install the ThinkPad Hardware Maintenance Diskette Version 1.73 or later, and restart the computer.
2. From the main menu, select 1. Set System Identification.
3. Select 2. Read S/N data from EEPROM.

The serial number of each device in your computer is displayed; the serial number of the system unit is listed as follows:
- 20: Serial number

Write down that number.

Note: The serial number of the system unit is also written on the label attached to the bottom of the computer.

After you have replaced the system board, restore the serial number by doing the following:
1. Install the ThinkPad Hardware Maintenance Diskette Version 1.73 or later and restart the computer.
2. From the main menu, select 1. Set System Identification.
3. Select 1. Add S/N data from EEPROM.
   Follow the instructions on the screen.

Retaining the UUID
The Universally Unique Identifier (UUID) is a 128-bit number uniquely assigned to your computer at production and stored in the EEPROM of your system board. The algorithm that generates the number is designed to provide unique IDs until the year A.D. 3400. No two computers in the world have the same number.

When you replace the system board, you must set the UUID on the new system board as follows:
1. Install the ThinkPad Hardware Maintenance Diskette Version 1.73 or later, and restart the computer.
2. From the main menu, select 4. Assign UUID.
   A new UUID is created and written. If a valid UUID already exists, it is not overwritten.

Reading or writing the ECA information
Information on Engineering Change Announcements (ECA) are stored in the EEPROM of the system board. The electronic storage of this information simplifies the procedure to check if the ECA has been previously applied to a machine. The machine does not need to be disassembled to check for the ECA application.
To check what ECAs have been previously applied to the machine, use the ECA Information Read/Write function on the ThinkPad Hardware Maintenance Diskette Version 1.73 or later.

1. Insert the ThinkPad Hardware Maintenance Diskette Version 1.73 or later, and restart the computer.
2. From the main menu, select 6. Set ECA Information.
3. To read ECA information, select 2. Read ECA/rework number from EEPROM and follow the instruction.
4. To read box build date, select 5. Read box build date from EEPROM, and follow the instruction on the screen.

After an ECA has been applied to the machine, the EEPROM must be updated to reflect the ECA's application. Use the ThinkPad Hardware Maintenance Diskette Version 1.73 or later to update the EEPROM.

**Note:** Only the ECA number is stored in the EEPROM. The machine type of the ECA is assumed to be the same as the machine type of the machine that had the ECA applied to it.

1. Insert the ThinkPad Hardware Maintenance Diskette Version 1.73 or later, and restart the computer.
2. From the main menu, select 6. Set ECA Information.
3. To write ECA information, select 1. Write ECA/ rework number from EEPROM, and follow the instruction.
4. To write box build date, select 4. Write box build date from EEPROM, and follow the instruction on the screen.

If the system board is being replaced, try to read the ECA information from the old system board and transfer the information to the new system. If the system board is inoperable, this will not be possible.
Removing and replacing a FRU

This section presents directions and drawings for use in removing and replacing a FRU. Be sure to observe the following general rules:

1. Do not try to service any computer unless you have been trained and certified. An untrained person runs the risk of damaging parts.
2. Before replacing any FRU, review “FRU replacement notices” on page 51.
3. Begin by removing any FRUs that have to be removed before the failing FRU. Any such FRUs are listed at the top of the page. Remove them in the order in which they are listed.
4. Follow the correct sequence in the steps for removing the FRU, as given in the drawings by the numbers in square callouts.
5. When turning a screw to replace a FRU, turn it in the direction as given by the arrow in the drawing.
6. When removing the FRU, move it in the direction as given by the arrow in the drawing.
7. To put the new FRU in place, reverse the removal procedure and follow any notes that pertain to replacement. For information about connecting and arranging internal cables, see “Locations” on page 103.
8. When replacing a FRU, use the correct screw as shown in the procedures.

⚠️ DANGER

Before removing any FRU, turn off the computer, unplug all power cords from electrical outlets, remove the battery pack, and then disconnect any interconnecting cables.

Attention: After replacing a FRU, do not turn on the computer until you have made sure that all screws, springs, and other small parts are in place and none are loose inside the computer. Verify this by shaking the computer gently and listening for rattling sounds. Metallic parts or metal flakes can cause electrical short circuits.

Attention: The system board is sensitive to, and can be damaged by, electrostatic discharge. Before touching it, establish personal grounding by touching a ground point with one hand or by using an electrostatic discharge (ESD) strap (P/N 6405959).
1010 Battery pack

⚠️ DANGER

Use only the battery specified in the parts list for your computer. Any other battery could ignite or explode.

Pull the cover toward you and upward, in the direction shown by arrow 1, while holding the sides of the computer as shown in this figure.

(continued)
Unlock the battery release lever 3. Holding the battery release lever in the unlocked position 4, remove the battery pack in the direction shown by arrow 5.

When installing: Install the battery pack along the slide rails of the slot. Then make sure that the battery release lever is in the locked position.
1020 Leaf spring and leaf spring cover

For access, remove this FRU:
- "1010 Battery pack" on page 55

When installing: Make sure that the latches on the bottom side of each bezel are attached firmly.
### 1040 Leather front cover, leather cover, and extended latch knob assembly

For access, remove these FRUs in order:
- “1010 Battery pack” on page 55
- “1020 Leaf spring and leaf spring cover” on page 57

**Note:** For the models without the wireless WAN rod antenna, skip steps from 1 to 5.

1. Push up the antenna ring as shown in this figure.
Removing and replacing a FRU

Bend the edge of the leather cover a little toward outside 5, and pull the antenna rod out from the gap between the leather front cover and the leather cover 6.

Detach the computer in direction of the arrow 7.

(continued)
Removing and replacing a FRU

Remove three screws 8, and detach the leather front cover 9 and the extended latch knob assembly 10.

**Note:** The extend latch knob assembly is secured with a double-faced adhesive tape a. When you install new extended latch knob assembly, peel the protection sheet of the tape off, and attach the extended latch knob assembly to the slot of the leather cover.

<table>
<thead>
<tr>
<th>Step</th>
<th>Screw (quantity)</th>
<th>Color</th>
<th>Torque</th>

<td>Silver</td>
<td>0.167 Nm</td>
</tr>
<tr>
<td></td>
<td></td>
<td></td>
<td>(1.7 kgfcm)</td>
</tr>
</tbody>
</table>

**When installing:** Attach the extended latch knob and the leather front cover as shown in this figure. If the placement of the extended latch knob is not correct, the leather front cover cannot be installed properly.
1050 Hard disk drive cover, hard disk drive, and hard disk drive rubber rails

For access, remove this FRU:
• “1010 Battery pack” on page 55

Attention

• Do not drop the hard disk drive or apply any physical shock to it. The hard disk drive is sensitive to physical shock. Improper handling can cause damage and permanent loss of data.
• Before removing the drive, have the user make a backup copy of all the information on it if possible.
• Never remove the drive while the system is operating or is in suspend mode.

<table>
<thead>
<tr>
<th>Step</th>
<th>Screw (quantity)</th>
<th>Color</th>

</tr>
</thead>
<tbody>
<tr>
<td>3</td>
<td>Hard disk drive screw, M3 × 3 mm, wafer-head, nylon-coated (1)</td>
<td>Black</td>
<td>0.196 Nm (2 kgfcm)</td>
</tr>
</tbody>
</table>

(continued)
When installing: Make sure that the hard disk drive connector is attached firmly.

When installing: The rubber rails on the hard disk drive must be attached to the replacement drive. Otherwise the drive cannot be installed properly.
1060 DIMM cover and DIMM

For access, remove this FRU:
• “1010 Battery pack” on page 55

Note: Loosen the screws 1, but do not remove them.

When installing: Insert the notched end of the DIMM into the socket. Press the DIMM firmly, and pivot it until it snaps into the place. Make sure that it is firmly fixed in the slot and does not move easily.
1070 Keyboard

For access, remove this FRU:
- "1010 Battery pack" on page 55

<table>
<thead>
<tr>
<th>Step</th>
<th>Icon</th>
<th>Screw (quantity)</th>
<th>Color</th>

</tr>
</tbody>
</table>

[Diagram of keyboard removal]

(continued)
When installing: do as follows:
1. Attach the keyboard connector.

(continued)
2. Attach the keyboard so that the keyboard edges are under the frame as shown in this figure.

3. To make sure that the front side of the keyboard is housed firmly, gently press the keys with your thumbs and try to slide the keyboard toward you.

4. Secure the keyboard by tightening the screws from the bottom side of the computer.
Removing and replacing a FRU

1080 Backup battery

⚠️ DANGER

Use only the battery specified in the parts list for your computer. Any other battery could ignite or explode.

For access, remove these FRUs in order:
- “1010 Battery pack” on page 55
- “1070 Keyboard” on page 65

When installing: Make sure that the battery connector is attached firmly.
1090 Keyboard bezel

For access, remove these FRUs in order:

- "1010 Battery pack" on page 55
- "1070 Keyboard" on page 65

<table>
<thead>

In step 4, strip off the tapes securing the antenna cables, and release the cables from the cable guides.
Removing and replacing a FRU

When installing:

1. Route the antenna cables along the cable guides and secure them with the tapes. As you route the cables, make sure that they are not subjected to any tension. Tension could cause the cables to be damaged by the cable guides, or a wire to be broken.

2. Make sure that the LCD connector is attached firmly.
1170 System board, HDD sub card, fansink, and PC Card slot assembly

Important notices for handling the system board

When handling the system board, bear the following in mind.

- At every point in the process, be sure not to drop or stack the system board.
- The system board has an accelerometer, which can be broken by applying several thousands of G-forces.

Note: Dropping a system board from a height of as little as 6 inches so that it falls flat on a hard bench can subject the accelerometer to as much as 6,000 G’s of shock.

- Be careful not to drop the system board on a bench top that has a hard surface, such as metal, wood, or composite.
- If a system board is dropped, you must test it, using PC-Doctor for DOS, to make sure that the HDD Active Protection still functions (see below).

Note: If the test shows that HDD Active Protection is not functioning, be sure to document the drop in any reject report, and replace the system board.

- Avoid rough handling of any kind.
- If you put a system board down, be sure to put it only on a padded surface such as an ESD mat or conductive corrugated material.

After replacing the system board, run PC-Doctor for DOS to make sure that HDD Active Protection still functions. The procedure is as follows:

1. Place the computer on a horizontal surface.
2. Run Diagnostics --> ThinkPad Devices --> HDD Active Protection Test.
   Attention: Do not apply physical shock to the computer while the test is running.

For access, remove these FRUs in order:
- “1010 Battery pack” on page 53
- “1030 Left bezel and right bezel” on page 58
- “1040 Leather front cover, leather cover, and extended latch knob assembly” on page 59
- “1050 Hard disk drive cover, hard disk drive, and hard disk drive rubber rails” on page 62
- “1060 DIMM cover and DIMM” on page 64
- “1070 Keyboard” on page 65
- “1080 Backup battery” on page 68
- “1090 Keyboard bezel” on page 69
- “1110 PCI Express Mini Card for wireless LAN” on page 73
- “1120 PCI Express Mini Card for wireless WAN” on page 75
- “1130 Modem daughter card (MDC-1.5)” on page 76
- “1140 Second fan” on page 77
- “1150 DC-in cable assembly and RJ-11 cable assembly kit” on page 78
- “1160 LCD assembly” on page 79
Removing and replacing a FRU

Following components soldered on the top side of the system board are extremely sensitive. When you service the system board, avoid any kind of rough handling.

- Accelerometer chip for the HDD Active Protection System™
- Security chip
- CPU
- MCH (Memory Controller Hub)
- ICH (I/O Controller Hub)

**When installing:** Make sure that the speaker connector 5 is attached to the system board firmly.

(continued)
Removing and replacing a FRU

In step 7, detach the HDD sub card from the system board.

When installing: When attaching the system board to the base cover, adjust the placement of the wireless radio switch as shown in a. Improper placement of the switch might cause a damage.

Note: Remove the fansink screws in the order shown b, c, and d.

(continued)
Removing and replacing a FRU

Turn the system board over, and then disconnect the PC Card slot assembly from the system board.

In step 12, press the eject button of the PC Card slot assembly. The eject button pops out.

In step 14, detach the claws of the slot, and remove the PC Card slot assembly in the direction of arrow 15.
Removing and replacing a FRU

1180 Base cover and speaker

For access, remove these FRUs in order:

- “1010 Battery pack” on page 55
- “1030 Left bezel and right bezel” on page 58
- “1040 Leather front cover, leather cover, and extended latch knob assembly” on page 59

When installing: Make sure that connectors 2 and 3 are attached firmly.
Removing and replacing a FRU

2030 Bluetooth daughter card (BDC-2)

For access, remove these FRUs in order:

- “1010 Battery pack” on page 55
- “2010 LCD front bezel and clear plate” on page 89

When installing: Make sure that the connector is attached firmly.
2040 LCD panel and LCD cable

For access, remove these FRUs in order:
- “1010 Battery pack” on page 55
- “1030 Left bezel and right bezel” on page 58
- “1040 Leather front cover, leather cover, and extended latch knob assembly” on page 59
- “1070 Keyboard” on page 65
- “1090 Keyboard bezel” on page 69
- “1110 PCI Express Mini Card for wireless LAN” on page 73
- “1120 PCI Express Mini Card for wireless WAN” on page 75
- “1160 LCD assembly” on page 79
- “2010 LCD front bezel and clear plate” on page 89

When installing: Make sure that the LCD cable and the cable guide are attached firmly as shown in a.
Removing and replacing a FRU

When installing: Make sure that the LCD cable is attached firmly.
2050 Wireless WAN antenna cable set, wireless WAN rod antenna (with special tool and ring), and aluminum tape for wireless WAN

For access, remove these FRUs in order:

- “1010 Battery pack” on page 55
- “1030 Left bezel and right bezel” on page 58
- “1040 Leather front cover, leather cover, and extended latch knob assembly” on page 59
- “1070 Keyboard” on page 65
- “1090 Keyboard bezel” on page 69
- “1110 PCI Express Mini Card for wireless LAN” on page 73
- “1120 PCI Express Mini Card for wireless WAN” on page 75
- “1160 LCD assembly” on page 79
- “2010 LCD front bezel and clear plate” on page 89
- “2040 LCD panel and LCD cable” on page 93
Removing and replacing a FRU

In step 3, peel the aluminum tape off.

When installing: As you route the cables, make sure that they are not subjected to any tension. Tension could cause the cables to be damaged by the cable guides, or a wire to be broken.

In step 4, use the special tool shipped with the antenna to remove the rod antenna.

(continued)
In step 6, detach the rod antenna from the antenna cable.

**Note:** In models with Wireless WAN antenna cable set with 2nd antenna (Verizon), the 2nd antenna is attached on the PCI Express Mini Card slot for wireless WAN. When you replace the Wireless WAN antenna cable set with 2nd antenna (Verizon), detach the 2nd antenna as shown in this figure.
2060 Wireless LAN antenna

For access, remove these FRUs in order:
- “1010 Battery pack” on page 55
- “1030 Left bezel and right bezel” on page 58
- “1040 Leather front cover, leather cover, and extended latch knob assembly” on page 59
- “1070 Keyboard” on page 65
- “1090 Keyboard bezel” on page 69
- “1110 PCI Express Mini Card for wireless LAN” on page 73
- “1120 PCI Express Mini Card for wireless WAN” on page 75
- “1160 LCD assembly” on page 79
- “2010 LCD front bezel and clear plate” on page 89
- “2040 LCD panel and LCD cable” on page 93
- “2050 Wireless WAN antenna cable set, wireless WAN rod antenna (with special tool and ring), and aluminum tape for wireless WAN” on page 95

In step 1, release the antenna cables from the cable guides A.
When installing: Route the antenna cables as shown in this figure. As you route the cables, make sure that they are not subjected to any tension. Tension could cause the cables to be damaged by the cable guides, or a wire to be broken.
Removing and replacing a FRU

2070 Hinges and LCD rear cover

For access, remove these FRUs in order:
- “1010 Battery pack” on page 55
- “1030 Left bezel and right bezel” on page 58
- “1040 Leather front cover, leather cover, and extended latch knob assembly” on page 59
- “1070 Keyboard” on page 65
- “1090 Keyboard bezel” on page 69
- “1110 PCI Express Mini Card for wireless LAN” on page 73
- “1120 PCI Express Mini Card for wireless WAN” on page 75
- “1160 LCD assembly” on page 79
- “2010 LCD front bezel and clear plate” on page 89
- “2040 LCD panel and LCD cable” on page 93
- “2050 Wireless WAN antenna cable set, wireless WAN rod antenna (with special tool and ring), and aluminum tape for wireless WAN” on page 95
- “2060 Wireless LAN antenna” on page 98

(continued)
Removing and replacing a FRU
Removing and replacing a FRU

3010 ThinkPad Reserve Edition whole system

Following FRUs are included in ThinkPad Reserve Edition whole system FRU.

- Battery pack
- Keyboard (U.S. English)
  If the customer uses a country-unique keyboard in the defective computer and it is reusable, you need to remove it from the defective computer and reuse it in the new computer. For how to replace the keyboard, refer “1070 Keyboard” on page 65.
- Hard disk drive
  If the hard disk drive in the defective computer is reusable, you need to remove it from the defective computer and reuse it in the new computer. For how to replace the hard disk drive, refer “1050 Hard disk drive cover, hard disk drive, and hard disk drive rubber rails” on page 62.
- Extended latch knob
  For how to replace the extended latch knob, refer “1040 Leather front cover, leather cover, and extended latch knob assembly” on page 59.

Since no wireless LAN card or wireless WAN card is shipped with ThinkPad Reserve Edition whole system FRU, you need to remove the card from the defective computer and reuse it in the new computer. For how to replace those cards, refer “1110 PCI Express Mini Card for wireless LAN” on page 73 or “1120 PCI Express Mini Card for wireless WAN” on page 75.

Parts list

- Each FRU is available for all types or models, unless specific types or models are specified.
- FRU with specific models listed and described as xxU (where U is an example of a country designator) should be used for all models ending in U.
- FRU with specific models listed and described as 3Dx (where 3D is an example of a unique configuration) should be used for all of these models, unless specific country or region designator is specified.
- A CRU (customer replaceable unit) is identified by a single asterisk (*) or two asterisks (**) in the CRU ID column. An N in the CRU ID column means the part is not a CRU. A single asterisk (*) means the part is an External CRU; two asterisks (**) means the part is an Internal CRU.

ThinkPad computers contain the following types of the external CRUs:

**External CRUs (pluggable)**
These CRUs unplug from the computer. Examples of these types of CRUs include an ac adapter, an external keyboard, a mouse, a power cord, a port replicator, a USB device, and an external bay device adapter.

**External CRUs with latches**
These CRUs have a latch to help you to remove and replace the part. Examples of these types of CRUs include a battery pack, an Ultrabay device such as an optical drive, a hard disk drive, and an extended battery.

ThinkPad computers contain the following types of the internal CRUs:

**Internal CRUs (located behind an access panel)**
These CRUs are isolated parts within the computer that are concealed by an access panel that is typically secured by either one or two screws. Once the access panel is removed, only the specific CRU is visible. Examples of these types of CRUs include a memory card and a hard disk drive.

**Internal CRUs (located within the product itself)**
These CRUs are accessible only by opening the outer case of the computer. Examples of these CRUs include the integrated keyboard parts beneath the integrated keyboard and parts beneath the palm rest.

- A RoHS compliant FRU is identified by an R. An N in the RoHS ID column means the part is not a RoHS compliant FRU.
- FRUs marked with OP are available as options.
